

Mapping and Managing Riparian Zones

Landcare Research LINK Seminar

Ministry for Primary Industries
Manatū Ahu Matua

*Dairy***NZ** 

LANDCARE RESEARCH
MANAAKI WENUA

Today's seminar

Outline:

- 30 mins on “Riparian Planner” background
- 15 mins of live demonstration
- Q&A

Key messages:

- A simplified, user-friendly & effective tool
 - Digital, accountable & transparent
- ...to **actually** enhance water quality

The DairyNZ Why? Freshwater Reform & Sustainable Dairying

Two big drivers for enhanced water quality, nationwide...

“Water Accord” – Industry commitment on x8500 farms

- Stock exclusion (2017)
- Crossings (2018)
- Riparian plans (2020)
- Actions complete (2030)

DairyNZ responsible for:

- Reporting (3rd party audits)
- Farmer guidance & **tools**

New Zealand Government

The DairyNZ Why?

Filling the Industry toolbox

Riparian management
enhances water quality...

- Stock exclusion – bankside erosion & direct defecation
- Grass filters – strip N, P & *E.coli* (cut & carry)
- Plantings – cool water, shade weeds & offer habitat

So, there must already be a practical riparian tool yes? Yeah nah.

The LR Why? Riparian management & biodiversity

- Our focus (in this space): biodiversity and ecosystem research
- Understand ecosystem services sustainability and specifically how riparian networks operate
- Focused around how these systems work in an agricultural land use context

The LR Why? Riparian management & biodiversity

Riparian networks form dynamic links between terrestrial and aquatic ecosystems, mediate exchange of cross-ecosystem subsidies, provide valuable ecosystem services and sustain under-represented biodiversity

Some of the key areas of research focus presently are

- How to improve mitigation benefits
- Measuring multiple functions/services
- Creating resilient catchments
- Scaling up to national scales

This research aims to help us understand the critical role riparian networks play

The LR Why? Riparian management & biodiversity

An example... Mangawara Wetland Project

- Restoring habitat & enhancing water treatment
- Floating wetland for treatment
- 93% removal of nitrate & 80% total P from water leaving

The LR Why? Riparian management & biodiversity

Another example – UAV's monitoring on-farm

- Can we use LiDAR or Multispectral imagery to determine extent, continuity, slope and vegetation condition?
- Scoping study

The LR Why? Integration with our Informatics programme

- Building on work under our Nature Services ‘brand’
- Leveraged our experience in spatial mapping web delivery and science/applied science data services to stakeholders
- Future potential to integrate new techniques and technologies for measuring wetland/riparian ecosystems
- Partnership will allow us to further develop opportunities to assist in getting evidence-based decision making into the agricultural space such as the important dairy sector

The DairyNZ Development story...

Farmers & rural professionals wanted:

- Better water quality
- Easy to use
- Low cost

Industry needed (more):

- Auditing & Reporting
- Consistency

The DairyNZ Development story...

Don't believe us?

The DairyNZ Development story – Roll-out & Support

Councils & professionals (now) regional training sessions

Farmers (2017+) training, guides & videos (...Field Days)

More time for farmers - less time with paperwork

Introducing the Riparian Planner - your online tool for creating quick, easy and effective riparian plans

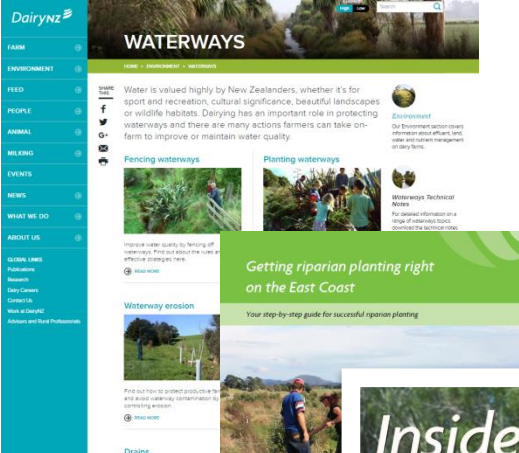

(Region : workshop date : location)

The dairy industry has committed to every dairy farm having a riparian management plan by 2020. Riparian plans are increasingly part of consent obligations. Farmers need **your support and advice** to get their plan sorted.

Join a workshop for rural professionals near you, and walk away with:

- access to an intuitive online tool to make your job easier;
- skills to add to your service offering and the potential to grow your client base;
- knowledge at your fingertips - easy mapping, built-in calculators, regional plants;
- the confidence you can deliver a riparian plan - quickly, effectively and to budget;

Register [here](#) to secure your place for a session delivered by DairyNZ - **free of charge** and **in your region**.

The screenshot shows the DairyNZ website interface. The main heading is 'WATERWAYS'. Below it, there are several articles and links, including 'Fencing waterways', 'Planting waterways', 'Getting riparian planting right on the East Coast', and 'Waterway erosion'. The website has a blue sidebar with navigation options like 'FARM', 'ENVIRONMENT', 'FEED', 'PEOPLE', 'RURAL', 'MILKING', 'EVENTS', 'NEWS', 'WHAT WE DO', 'ABOUT US', 'SUPPORT', 'CONTACT', and 'WORK WITH US'.

The cover of 'Inside Dairy' magazine features a farmer in a red shirt standing in a field. The text on the cover includes 'Inside Dairy Your levy in action', 'FARMER LEADERSHIP Getting involved beyond the gate', and 'Farmers get a voice with role makers Partnership to secure sustainable industry'. The DairyNZ logo is also present.

LANDCARE RESEARCH
MANAAKI WHENUA

The LR Development story – Getting under the hood

Technical bits first...

- Web App in current web frameworks: Angular, Bootstrap, .Net, PostGIS database
- Web mapping with OpenLayers
- Consumes four different spatial services (LINZ, Landcare Research) all in the Cloud
- Authentication by a 3rd party cloud provider (Auth0)
- Web App and database hosted in the Cloud (Azure)

The LR Development story – Getting under the hood (Step 1)

DairyNZ RIPARIAN PLANNER LANDCARE RESEARCH
MANAAKI WHENUA

Nathan Guy Save

1. Describe Plan 2. Map Waterways 3. Plan Actions 4. Get Summary

Fill out the information unique to your property. Entering a verifiable supply number will let the tool locate the associated property on the map.

Plan name:

Start year:

Supply Company:

Supply Number: Verify

The LR Development story – Getting under the hood (Step 2)

The screenshot displays a web-based mapping application interface. At the top, there are four navigation tabs: "1. Plan", "2. Map Waterways", "3. Plan Actions", and "4. Get Summary". The "2. Map Waterways" tab is active. Below the tabs, a light green instruction box reads: "Zoom in and trace its waterways on the map below. Use the zooming and dragging the map. Then use the tool buttons on the left to define your property's boundary, and to trace its waterways. Select a tool to see more information on how to use it. In the Plan Actions step, review and update the information for each waterway using the waterways list on the top right of the map." On the left side, a vertical toolbar contains several icons: a home icon, a zoom in (+) and zoom out (-) icon, a pan icon, a boundary tool icon, a waterway tool icon, a wetland tool icon, a pan icon, and a close (X) icon. The main map area shows an aerial view of a rural landscape with a yellow rectangular boundary. Blue lines represent waterways, and green areas represent wetlands. A house icon is placed on the map. On the right side, a "WATERWAYS" list is visible, containing: "Boundary wetland", "Main river", "Ephemeral creek", "Shed wetland", and "Ephemeral 2". In the bottom left corner, an inset map shows a zoomed-in view of a specific wetland area, highlighted in orange. Overlaid on this inset is an "Edit Waterways" dialog box for the "Shed wetland".

Edit Waterways

Shed wetland

Waterway name	Shed wetland
Waterway type	Wetland
Area	3,070m ²
Perimeter	370m
Accord waterway (Waterways at least 1m wide by 30m deep and significant wetlands.)	<input type="checkbox"/> No
Stock excluded	<input type="checkbox"/> No
Length of fencing required to complete stock exclusion (m)	370
Predominant vegetation type	Grass

The LR Development story – Getting under the hood (Step 3)

1. Describe Plan
2. Map Waterways
3. Plan Actions
4. Get Summary

Fill in the boxes below to plan costs, actions and effort per year for each waterway.

For further information on how to carry out riparian planting please refer to the information and downloadable guides found on [Planting Waterways](#).

Edit the planning costs to change the default plant and fencing costs used in the calculations.

Edit planning costs
