Catchment management - complexity

Mangatarere

Fraser et al. (2014) Insights about collaborative catchment decision-making processes – reflections from two case studies. Aqualinc Research Report C1205601

Agreeing to limits for water

- Why do this collaboratively?
 - Attempting to build consensus
 - Reducing future conflict
 - Builds capacity to implement solutions
 - Evolutionary rather than reactionary
 - Challenges are context specific
 - Need local knowledge
 - Accessing knowledge we may not have known existed

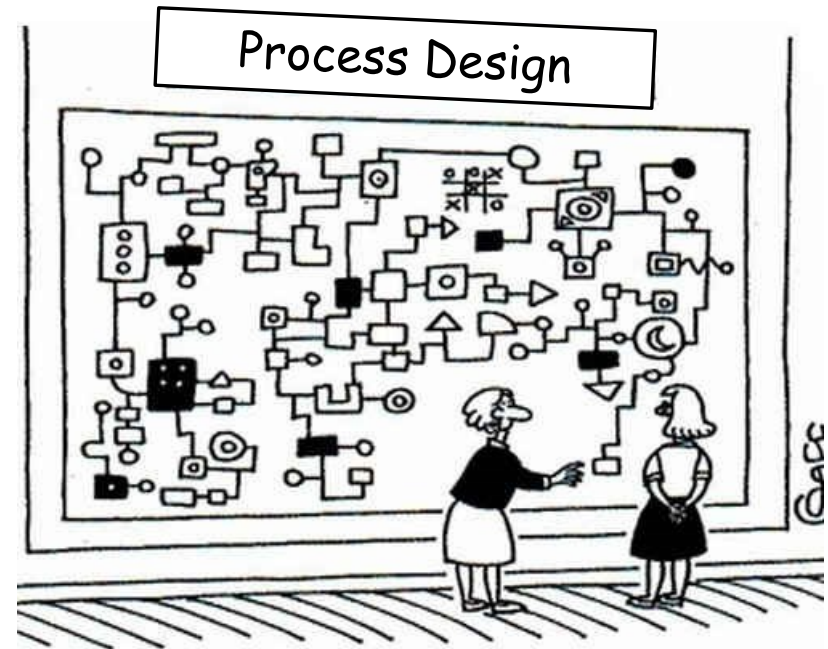

Challenges for collaboration

- More people involved
 - Different values
 - Different knowledge
- Time, resource and capability limited
- Need to lift social process skills, not just technical

Intentional Design

“and this is where the committee went insane”

Intentional design – critical factors

- Build holistic systems view
- Schematic design
 - process & content
- Monitor and reflect as you go

THE FAR SIDE

By GARY LARSON

"OK, OK, OK. ... Everyone just calm down, and we'll try this thing one more time."

Building a systems view

- Causal loop and influence diagrams
- Integrative models of increasing complexity
- To understand
 - catchment system drivers and trends
 - what values matter
 - trade-offs across values

Outcome: Understanding how values are connected in catchment

Process and content

PROCESS

Recruitment & engagement

Group facilitation

Collaborative modelling

Sharing across knowledge systems

CONTENT

Stakeholder values

Defining attributes

Scenarios (strategic thinking)

Visualizing impact (WaterWheel)

Process and content

Livelihood & Economic Use

Ecosystem Health

Cultural & Spiritual

Hydroelectricity

Fish & Food Gathering

Natural Form & Character

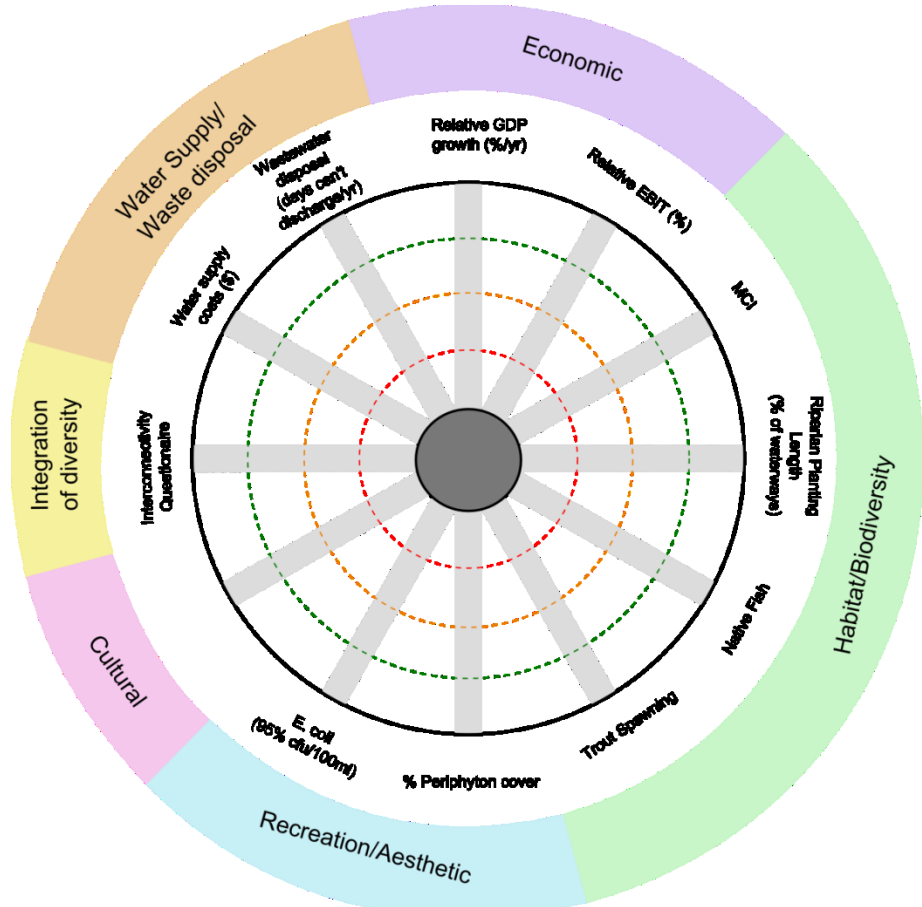

Recreation

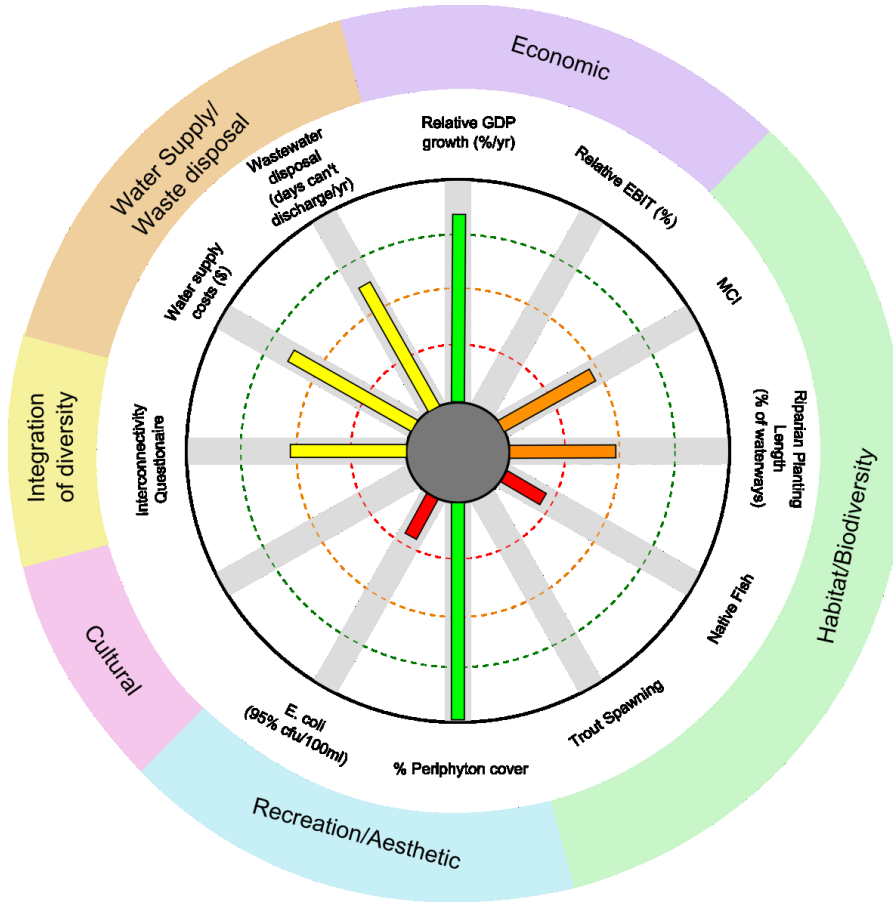

VALUES

Process and content

Status quo

Milk Solids/ha

Scenario

Milk Solids/ha

Monitor & reflect

- Monitor process and content
 - Process – includes capacity to participate
 - Content– includes values, attributes, scenarios
- Reflect & redesign as you go
- Opportunities to learn between processes

Reflecting on lessons

- Easier to agree on high level principles – much harder to agree on actual limits
- Takes more time towards end of process
- Process gains momentum in wrong direction
 - difficult to modify direction
- Trust can allow delegation to maintain progress
